

Wi-Fi HaLow USB Dongle

HaLowFly

Instantly Add Long-Range HaLow Connectivity to Your Device

Description

The Wi-Fi HaLow USB Dongle is a plug-and-play wireless module that instantly equips handheld PCs, smartphones, tablets, and industrial devices with Wi-Fi HaLow (IEEE 802.11ah) capability. Simply plug it into a USB port and the device can immediately connect to a HaLow network—no hardware modification or device replacement required.

Features

- **Plug-and-Play Operation:**

- Works immediately when plugged into the USB port
- No need to open or modify the host device
- Supports major operating systems (Android / Linux / Windows, depending on product)

- **Instant Wi-Fi HaLow (802.11ah) Support :**

- Adds HaLow wireless capability to any device with USB
- Connects directly to HaLow APs or gateways
- Ideal for IoT, industrial, and long-range wireless applications

- **Low-Power Operation :**

- HaLow technology provides ultra-low power consumption
- Suitable for battery-powered mobile or field-use devices

- **Long-Range Wireless Connectivity**

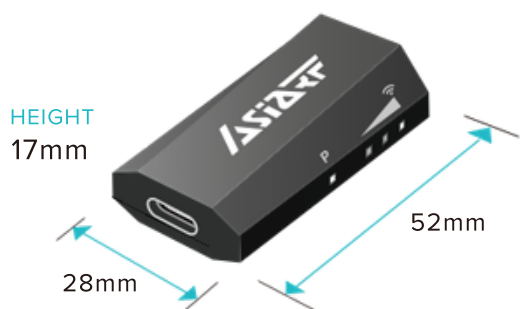

- Up to 1 km line-of-sight range (varies with antenna and environment)
- Excellent penetration through walls and obstacles
- Reliable connectivity for warehouses, factories, basements, and outdoor areas

- **Compact and Portable :**

- Small USB dongle form factor
- Easy to carry and deploy in any environment
- Perfect for field technicians and mobile workers

- **Secure and Manageable (Model Dependent) :**

- Supports WPA3 SAE/OWE security
- Compatible with IoT management platforms
